The present sequence is a cDNA encoding novel human protein (NHP) which share structural similarity with animal Notch ligands, particularly SEL-1. SEL-1 proteins are negative regulators of Notch family receptors. Notch receptors and their associated signalling pathways have been associated with development, apoptosis, neuron growth and maintenance. Labeled NHP probes can be used to screen a human genomic library which is helpful for identifying polymorphisms, determining the genomic structure of a given locus/allele and designing diagnostic tests. The NHP is also useful in screening techniques for drugs which treats symptomatic or phenotypic manifestations of perturbing the normal function of NHP in the body. Nucleotide constructs encoding functional NHPs, antisense antisense molecules can be used in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        approaches for modulating gene expression such as for preventing or treating Alzheimer's disease, diabetes, cancer (pancreatic cancer, insulinomas), blood pressure abnormalities, neurodegenerative diseases such as Parkinson's disease, stroke, vascular dementia and conditions requiring modulation of fat and cholesterol metabolism such as coronary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    sequence similarity with mammalian SEL-1 proteins which are negative regulators of Notch family receptors, useful for treating diabetes,

The present sequence is a cDNA encoding novel human protein (NHP) which har a structural similarity with animal Notch ligands, particularly SEL-1. SEL-1 proteins are negative requiators of Notch family receptors. Notch receptors and their associated signalling pathways have been associated with development, apoptosis, neuron growth and maintenance. Labeled NHP probes can be used to screen a human genomic library which is helpful for identifying polymorphisms, determining the genomic structure of a given locus/allele and designing diagnostic tests. The NHP is also useful in screening techniques for drugs which treats symptomatic or phenotypic manifestations of perturbing the normal function of NHP in the body. Nucleotide constructs encoding functional NHPs, antisense, antisense molecules can be used in gene therapy approaches for modulating gene expression such as for preventing or treating Alzheimer's disease, diabetes, cancer (pancreatic cancer, insulinomas), blood pressure abnormalities, neurodegenerative diseases such as Parkinson's disease, stroke, vascular dementia and conditions requiring modulation of fat and cholesterol metabolism such as coronary disease

                                                                                                                                                                                                                                                                                                  human protein (NHP) cDNA #5, sharing similarity with Notch ligands.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is a cDNA encoding novel human protein (NHP) which share structural similarity with animal Notch ligands, particularly SEL-1. SEL-1 proteins are negative regulators of Notch family receptors. Notch receptors and their associated signalling pathways have been associated with development, apoptosis, neuron growth and maintenance. Labeled NHP probes can be used to screen a human genomic library which

approaches for modulating gene expression such as for preventing or treating Alzheimer's disease, diabetes, cancer (pancreatic cancer, insulinomas), blood pressure abnormalities, neurodegenerative diseases such as Parkinson's disease, stroke, vascular dementia and conditions requiring modulation of fat and cholesterol metabolism such as coronary
             structure of a given locus/allele and designing diagnostic tests. The NHP is also useful in screening techniques for drugs which treats symptomatic or phenotypic manifestations of perturbing the normal function of NHP in the body. Nucleotide constructs encoding functional NHPs, antisense, antisense molecules can be used in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    840
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                180

The present sequence is a cDNA encoding novel human protein (NHP) which share structural similarity with animal Notch ligands, particularly share structural similarity with animal Notch ligands, particularly SEL-1. SEL-1 proteins are negative regulators of Notch family receptors. Notch receptors and their associated signalling pathways have been associated with development, apoptosis, neuron growth and maintenance. Labeled NHP probes can be used to screen a human genomic library which is helpful for identifying polymorphisms, determining the genomic structure of a given locus/allele and designing diagnostic tests. The NHP is also useful in screening techniques for diagnostic treats symptomatic or phenotypic manifestations of perturbing the normal function of NHP in the body. Nucleotide constructs encoding functional NHPs, antisense, antisense molecules can be used in gene therapy approaches for modulating gene expression such as for preventing or treating Alzheimer's disease, diabetes, cancer (pancreatic cancer, insulinomas), blood pressure abnormalities, neurodegenerative diseases such as Parkinson's disease, stroke, vascular dementia and conditions centuring modulation of fat and cholesterol metabolism such as coronary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel isolated human polynucleotides encoding polypeptides sharing sequence similarity with mammalian SEL-1 proteins which are negative regulators of Notch family receptors, useful for treating diabetes,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 atgaagcocttgtctctgttaatagagatattgataattcttggggtcacaattaaaact

```

The present sequence is a cDNA encoding novel human protein (NHP) which share structural similarity with animal Notch ligands, particularly share structural similarity with animal Notch ligands, particularly star captors are not sequiators of Notch family receptors. Notch receptors and their associated signalling pathways have been associated with development, apoptosis, neuron growth and maintenance. Labeled NHP probes can be used to screen a human genomic library which is helpful for identifying polymorphisms, determining the genomic structure of a given locus/allele and designing diagnostic tests. The NHP is also useful in screening techniques for drugs which treats symptomatic or phenotypic manifestations of perturbing the normal function of NHP in the body. Nucleotide constructs encoding functional NHPs, antisense, antisense molecules can be used in gene therapy approaches for modulating gene expression such as for preventing or treating Alzheimer's disease, diabetes, cancer (pancreatic cancer, insulinomas), blood pressure abnormalities, neurodegenerative diseases such as Parkinson's disease, stroke, vascular dementia and conditions are the stroke, as the secondary accountry.

Novel isolated human polynucleotides encoding polypeptides sharing sequence similarity with mammalian SEL-1 proteins which are negative regulators of Notch family receptors, useful for treating diabetes, cancer

Claim 5; Page 32; 39pp; English.

The present sequence is a cDNA encoding novel human protein (NHP) which share structural similarity with animal Notch ligands, particularly share structural similarity with animal Notch ligands, particularly SEL-1 SEL-1 proteins are negative regulators of Notch feamly receptors.

Notch receptors and their associated signalling pathways have been associated with development, apoptosis, neuron growth and maintenance. Labeled NHP probes can be used to screen a human genomic library which is helpful for identifying polymorphisms, determining the genomic structure of a given locus/allele and designing diagnostic tests. The NHP is also useful in screening techniques for drugs which treats symptomatic or phenotypic manifestations of perturbing the normal function of NHP in the body. Nuclectide constructs encoding functional NHPs, antisense, antisense molecules can be used in gene therapy approaches for modulating gene expression such as for preventing or treating Alzheimer's disease, diabetes, cancer (pancreatic cancer, insulinomas), blood pressure abnormalities, neurodegenerative diseases such as Parkinson's disease, stroke, vascular dementia and conditions artery disease.

```
The present sequence represents a gene designated TSA305, which is expressed specifically in pancreas tissue. The gene, sequences hybridizing with it, lise expression product, and antibodies recognizing the expression product, are useful in the investigation, diagnosis, prevention and treatment of pancreatic cancer.
                                                                                                                                                                       pancreas

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents a gene designated TSA305, which is expressed specifically in pancreas tissue. The gene, sequences hybridizing with it, its expression product, and antibodies recognizing the expression product, are useful in the investigation, diagnosis, prevention and treatment of pancreatic cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 464

AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; heptotropic; vulnerary; cottopatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; anticonvulsant; antiarthritic; immunosuppressant; immunostimulant; cardiant; thrombolytic; coaqulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; hypotensive; and notelic acids may be used for treat cancers; proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal haemoglobinuria, antidifammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence encodes a Sel-1L (Sel-1 like) protein (also previously known as Hip-1) of the invention. A vector containing the Sel-1L DNA, and the host cell containing it can be used to prepare a Sel-1L protein. Compositions containing the Sel-1L proteins, or peptides that interfere with their binding can be used in a method for treating or preventing Alzheimer's disease, diabetes (especially insulin dependent diabetes mellitus), cancer (especially pancreatic cancer), stroke, vascular dementia, Parkinson's disease, or coronary heart disease. The compositions can also be used to treat conditions requiring modulation of fat or cholesterol metabolism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sel-1L; Sel-1 like protein; Hip-1; Alzheimer's disease; diabetes; cancer insulin dependent diabetes mellitus; pancreatic cancer; stroke; therapy; vascular dementia; Parkinson's disease; coronary heart disease; fat metabolism; cholesterol metabolism; ss.

us-09-714-882-1.rng

This sequence encodes a Sel-IL (Sel-1 like) protein (also previously known as Hip-1) of the invention. A vector containing the Sel-IL DNA, an the host cell containing it can be used to prepare a Sel-IL protein. Compositions containing the Sel-IL proteins, or peptides that interfere with their binding can be used in a method for treating or preventing Alzheimer's disease, diabetes (especially insulin dependent diabetes mellitus), cancer (especially pancreatic cancer), stroke, vascular compositions can also be used to treat conditions requiring modulation of fat or cholesterol metabolism.                                                                                                                                                                                                                                                                      Sequences AAF93180 - AAF93743 represent polynucleotide sequences encoding human SRT proteins. The cDNA sequences are isolated from various different human tissue cDNA libraries. The invention relates to a method for detecting cDNA encoding an SRT protein, a vector containing cDNA encoding SRT, a host cell transformed with the vector, an isolated SRT encoding SRT, and an antibody which binds to SRT. The polynucleotide sequence can be used in gene therapy and is useful in the recombinant production of SRT polypeptides, as a hybridisation probe to screen libraries to isolate cDNAs with sequence identity to SRT polypeptides, to map the gene encoding the SRT polypeptides and analysing genetic polynucleotide sequences can be used in polynucleotide sequences can be used in polymerase chain reaction, secreening for new therapeutic molecules and generation of antisense RNA
                                                                                                                                                                                                      New isolated nucleic acid molecule encoding a SRT polypeptide is useful for production of recombinant SRT polypeptides, gene mapping, diagnosing genetic disorders and for gene therapy -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    445

which encode human secretory or membrane proteins represented by
AAB8819. The AAB8419. Included in the invention are primers
AAB8817 - AAB88419. Included in the invention are primers
AAF9317 - AAF94295 and AAF62232 - AAF62235 which are used to isolate the
CDNA sequences of the invention. The invention also includes methods for
the production of antibodies directed against the proteins, and CDNA
sequences, which can be used in vaccines. The polynucleotide sequences
can be used in gene therapy. The polynucleotide sequences
can be used in gene therapy. The polynucleotide sequences
can be used in gene therapy. The polynucleotide sequences
can be used in gene therapy. The polynucleotide sequences
can be used as sociated with inappropriate secretory
protein/membrane protein expression. The nucleic acids and complementary
sequences may also be used as DNA probes in diagnostic assays
(e.g. polymerase chain reactions (PCR)) to detect and quantitate the
presence of similar nucleic acid sequences in samples. They may also be
consecuted to study the expression and function of secretory proteins/membrane
polypeptides and their role in metabolism. The polypeptides may be used
as antigens in the production of antibodies against them and in assays to
identify modulators (agonists and antagonists) of expression and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              activity. The antibodies and antagonists may also be used as therapeutic agents to down regulate expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence encodes a Sel-1L (Sel-1 like) protein (also previously known as Hip-1) of the invention. A vector containing the Sel-1L DNA, an the host cell containing it can be used to prepare a Sel-1L protein. Compositions containing the Sel-1L proteins, or peptides that interfere with their binding can be used in a method for treating or preventing Alzheimer's disease, diabetes (especially insulin dependent diabetes mellitus), cancer (especially pancreatic cancer), stroke, vascular dementia, Parkinson's disease, or coronary heart disease. The compositions can also be used to treat conditions requiring modulation of at or cholesterol metabolism.

/note="Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI; NCI_CGAP_Sub8 is a subtracted library derived from NCI_CGAP_Sub8. The NCI_CGAP_Sub8 library had 2:5 million recombinants. A single-stranded DNA preparation of NCI_CGAP_Sub5 was used as a tracer in a subtractive hybridization with a driver comprising; a pool of clones from NCI_CGAP_Sub5 was used driver population), a pool of clones from NCI_CGAP_Sub4 (IMAGE clone Ids 2732833-2737415, 3068040-3069191; 25% of the driver population), NCI_CGAP_Sub6 (pool AIF-AJU, IMAGE Ids 2738969-2733190; 25% of the driver population), and NCI_CGAP_Sub6 (pool AIF-AJU, IMAGE Ids 2738969-2733190; 25% of the driver population), and NCI_CGAP_Sub6 (pool AIF-AJU, IMAGE Ids 2788969-2733190; 25% of the driver population). Subtraction was performed as previously described (Bonaldo, Lennon & Soares (1996): Normalization and Subtraction: Two Approaches To Pacilitate Gene Discovery. Genome Research 7AG_IIB=NCI_CGAP_EDST 7AG_EDSAPCE.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         à
Cameroon (forest strain). The L3 were cultured in 20% FCS in IMDM+ NCTC 135 and collected after day 1, 2, or 3 in culture. L3 of 0. volvulus molt to fourth-stage larvae by day 5 in culture. mRNA was isolated from approximately 6000 molting larvae (mL3),2000 larvae from day 1, 2 or 3 in culture, and converted to double-stranded CDNA using reverse transcriptase and oligo(dT) followed by RNase H and DNA pol 1. The library was constructed in the lambda Uni-Zap XR vector and has 1 x 10E6 independent recombinants and the average insert size is -1200 bp. The library was constructed by Sara Lustigman and Michelle Lizotte-Waniewski in the Laboratory of Dr. S. A. Williams. The library is available from Dr. Sara Lustigman (email:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Briones, M.R.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    BF359310 404 bp mRNA EST 22-NOV-2000

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
